Documentation for Data Analysis

- The student data used in this report is based on Chancery enrollment on 5/5/2009.
- All students were projected forward to the next grade and assigned to the specific school based on zoning and all school option requests (Grandfathering, Magnet/Lottery, NCLB Choice, Open Enrollment, Zoned Options, etc.).
- The Kindergarten students were duplicated in the projected dataset to help account for new registrations which do not currently exist.
- The projected student data does not account for students being less likely to complete a Free and Reduced Lunch application as they move to a higher grade or tier level.
- The projected student data is based on optional school assignments that were approved on or before May 1, 2009. The data does not account for future acceptances or students placed after this date.
- The projected student data does not track new students that have registered for MNPS. The data also does not predict the number of students that will leave the district next year.
- Free and Reduced Lunch percentages include the Pre-K and Pre-School students.
